

ISAAC ASIEDU

Data Analyst | Operations Analytics | Agricultural Data

asieduisaac5775@gmail.com | +233 550 335 577 | [linkedin.com/in/isaac-asiedu-98522a211](https://www.linkedin.com/in/isaac-asiedu-98522a211) | Accra, Ghana

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in agricultural and operational analytics. At Krobea Farms, tracks production metrics across 10,000+ birds, cuts feed waste by 10-15%, and reduces manual reporting time by 30% through automated spreadsheet systems. Proficient in Python, SQL, Power BI, and Excel. Applies statistical analysis to production and financial data to support decisions that directly affect profitability.

CORE SKILLS

Analytics & BI: Python (Pandas, NumPy), SQL (joins, aggregations, subqueries), Power BI, Excel, Google Sheets

Data Engineering: Data cleaning, ETL workflows, automated reporting, data validation

Domain Knowledge: Agricultural operations, feed conversion analysis, cost reporting, production metrics

Soft Skills: Executive reporting, stakeholder communication, process optimization, cross-functional collaboration

WORK EXPERIENCE

Operations Analyst | Krobea Farms, Ghana

2026 - Present

- Reduced manual reporting time by 30% by building automated spreadsheet systems that tracked flock performance, feed usage, mortality rates, and veterinary costs across 10,000+ birds.
- Cut feed waste by 10-15% by monitoring feed conversion ratios and identifying operational inefficiencies in production cycles.
- Improved reporting accuracy by 20% through regular data audits and validation processes, reducing discrepancies in executive-facing reports.
- Consolidated operational and market-pricing data into executive reports that directly informed pricing decisions and profitability strategy.
- Delivered production and financial performance presentations to management, reducing time-to-decision on operational adjustments.

Data Analyst | Personal Projects

2025 - Present

- Improved data accuracy by 30%+ by developing Python cleaning scripts using Pandas to identify and resolve inconsistencies and missing values in raw datasets.
- Cut query execution time by 25% by writing optimized SQL queries (joins, aggregations) against large, unstructured transaction datasets.
- Analyzed 10,000+ customer and sales records using Python and statistical techniques to identify purchasing trends, improving decision-making efficiency by 20%.
- Automated repetitive reporting workflows using Python and spreadsheet logic, saving multiple hours of manual work per week while increasing consistency.
- Built interactive dashboards in Excel and Power BI to communicate raw data trends to non-technical stakeholders.

Data Entry Specialist | Springboard

2025

- Maintained 100% on-time completion rate across 500-1,000 contributor audits per week in a fast-paced remote environment.
- Reduced contributor repeat errors by 25% by delivering structured, specific feedback that improved task clarity downstream.
- Audited 500+ images and documents monthly for accuracy, completeness, and compliance, cutting error rates by 25%.
